

HAVELOCK
INDUSTRIES

CONTINUITY FOR A COMPLEX WORLD

CORPORATE INFORMATION PACKET - DECEMBER 2098

Company Overview & New-Hire Guide

Havelock Industries / Northstar Crown / Pacific Operations

PLAYER-FACING CORPORATE MATERIAL

Prepared for provisional H3 operational personnel

I

WELCOME TO HAVELOCK

A public company with a private responsibility

From the Office of Mara Chen-Leduc

Every complex emergency begins as several ordinary failures arriving at once: a patient who cannot be moved, a system that cannot be trusted, a jurisdiction that cannot act quickly enough, or a piece of infrastructure whose absence changes everything. Havelock exists to hold those failures apart long enough for people and lawful institutions to recover. You are joining us because you can make decisions when the procedure has run out.

Mara Chen-Leduc

President and Chief Executive Officer
Havelock Industries, Incorporated

H

THE HAVELOCK PROMISE

Continuity is not the preservation of a building, a contract, or a corporate logo. It is the preservation of human capability and the return of accountable public life.

Company at a glance

Corporate field	Public record
Legal name	Havelock Industries, Incorporated
Head office	Havelock Centre, Harbour Crown, Vancouver Free Municipality, British Columbia
Founded / listed	2039 / publicly listed since 2062
Employees	412,600 across 31 countries
Principal market	North American Alliance
President and CEO	Mara Chen-Leduc
Corporate slogan	Continuity for a Complex World
Public reputation	Technically excellent, politically connected, expensive, discreet, and difficult to replace

Havelock is an integrated continuity company. Its strength is not domination of one industry, but the ability to connect medicine, augmentation, infrastructure, emergency management, artificial intelligence, insurance, logistics, security, and strategic recovery inside one accountable contract chain.

A Havelock contract may combine	Why it matters
Emergency medical extraction and organ fabrication	The patient survives the journey, not merely the incident.
Cybernetic maintenance and identity protection	A worker remains a person when hardware, licences, and records fail together.
Secure transport and private security	Specialists and evidence reach the place that can use them.
Disaster housing and infrastructure restoration	Recovery continues after the cameras leave.
AI assurance and insurance underwriting	Responsibility remains traceable when automated systems make consequential decisions.

II

A HISTORY OF RECOVERY

From Vancouver cooperative to Alliance continuity partner

Year	Milestone	What changed
2039	Havelock Mutual Recovery Cooperative	Engineer Evelyn Havelock, Dr. Mateo Salazar, and Naomi Chen organize patient, technician, tissue-culture, and power-component movement across damaged Vancouver infrastructure.
2047	Havelock Continuity Group	Merges with Northline Medical Transit, Calder Pacific Engineering, and Mutual Infrastructure Underwriters; begins selling complete recovery contracts.
2054	First Alliance framework contract	Maintains portable medical identity, trauma transport, and organ-exchange continuity across regions.
2062	Public listing	Capital funds tissue fabrication, autonomous recovery vehicles, and continental logistics facilities.
2071	Augmentation medicine	Acquires Meridian Prosthetic Systems and formalizes employer-funded professional augmentation.
2078	Climate and infrastructure	Cascadia Climate Works expands Havelock into flood, water, microgrid, and emergency-housing contracts.
2084	Havelock Industries	Adopts current name as operations expand beyond emergency recovery.
2088	AI Assurance Division	Begins municipal, medical, industrial, and autonomous-logistics audits.
2092	Human Capability Charter	Publishes medical autonomy, maintenance, data, and responsibility standards for enhanced personnel.
2095	Strategic Continuity Framework	Becomes a preferred cross-border contractor for infrastructure, AI, prohibited technology, and enhanced-person emergencies.
2098	Current position	One of the Alliance's most capable crisis-management corporations - and one of its most politically connected.

The public corporate values

Value	Operational meaning
Preserve human life	Technology, property, evidence, and reputation are secondary to immediate life safety.
Restore lawful continuity	Emergency authority must return to accountable civil institutions as soon as conditions permit.
Build for failure	Systems require physical fallback, human oversight, and a defined recovery path.
Accept responsibility	The organization making a decision remains accountable for its consequences.
Protect human agency	Medical, cybernetic, and artificial systems must support informed choice and personal dignity.
Preserve evidence	Reliable records enable accountability, recovery, compensation, and public trust.
Improve the next response	Every incident must produce a documented improvement in training, equipment, policy, or design.

III

THE ORGANIZATION

Public structure and operating divisions

PUBLIC ACCOUNTABILITY

No single shareholder publicly controls Havelock Industries. The board operates through audit, medical ethics, risk and continuity, compensation, and public responsibility committees.

Operating divisions

Division	Public function
Havelock Human Systems	Regenerative medicine, prosthetics, augmentation support, rehabilitation, professional capability.
Havelock Infrastructure Continuity	Power, water, flood protection, emergency housing, repair coordination, climate resilience.
Havelock Emergency and Recovery Services	Medical extraction, industrial recovery, critical personnel protection, hazardous systems.
Havelock Systems Intelligence	AI assurance, identity architecture, autonomous-system audit, incident analytics.
Havelock Mobility and Orbital Services	Protected freight, aerospace medical transport, orbital emergency coordination, recovery logistics.
Havelock Risk and Assurance	Insurance, continuity planning, custody liability, compliance testing, institutional risk.
Havelock Corporate Services	Finance, legal, procurement, talent, public responsibility, employee support.
Strategic Continuity Office	Cross-division response to high-consequence incidents requiring exceptional authority and coordination.

Representative executive leadership

Executive	Position	Public background
Mara Chen-Leduc	President and CEO	Former infrastructure engineer and regional director.
Judith A. Kincaid	Board chair	Former Continental Infrastructure Board commissioner.
Javier Ochoa	Chief financial officer	Insurance, public infrastructure financing, cross-border credit.
Harjit Bains	Chief operating officer	Port logistics, emergency transport, autonomous freight.
Dr. Amina Okafor	Chief medical and human systems officer	Regenerative medicine and medical ethics.
Louis Tremblay	Chief infrastructure officer	Grid, water, coastal, and regional continuity.
Sun-hee Park	Chief systems intelligence officer	AI assurance, identity architecture, autonomous systems.
Isabel Romero	Chief legal and public responsibility officer	Corporate accountability and cross-border law.
Daniel Cardinal	Chief security and recovery officer	Emergency command, critical-site security, rescue operations.

IV

HOW CONTINUITY WORKS

The response cycle used across Havelock services

Stage	What employees are expected to do
1. Detect	Verify the failure, locate people at risk, establish who can lawfully act.
2. Stabilize	Stop immediate harm, create safe boundaries, preserve life-support and public trust.
3. Recover	Move people, evidence, critical systems, and specialists through a controlled route.
4. Restore	Return services and authority to accountable institutions; prevent emergency power from becoming permanent.
5. Review	Preserve records, identify failures, compensate harm, improve the next response.

1

A RULE WORTH REMEMBERING

A clean recovery is never worth a preventable civilian death. A damaged scene with living people and reliable evidence is a successful scene.

The Human Capability Charter

Charter element	Plain-language meaning
Employee right	Medical information, informed consent where possible, protected identity, necessary maintenance, independent counsel, and a recorded Consent Ledger.
Employee duty	Disclose capability or equipment changes that could endanger teammates, patients, or the public.
Corporate limit	Havelock may require capability standards, but may not claim ownership of a natural body, naturally occurring power, personality, or medically necessary life-support system.
Emergency authority	Temporary sedation, suppression, isolation, or system disconnection may be used only to preserve life, prevent catastrophic injury, or stop an immediate uncontrolled threat.
Exit protection	Necessary life-support maintenance cannot be abandoned when employment ends; ordinary restoration and replacement organs cannot be repossessed.

V

HAVELOCK AT NORTHSTAR CROWN

The most direct offworld extension of the Lower Mainland

Northstar Crown is a linked transfer complex in medium Earth orbit rather than one symmetrical station. Passenger rings, cargo and works spines, hotels, customs, maintenance docks, fuel systems, refuge spaces, and transfer machinery connect Earth, orbital, and cislunar traffic.

Field	Northstar Crown / Havelock presence
Permanent population	Approximately 6,500
Typical transient population	8,000-16,000
Primary role	Lift transfer, customs, cargo, passenger routing, repair, and refuge
Governance	Northstar Pacific Operations, Crown Station Authority, Continental Infrastructure Board, regulators, labour, insurers, national authorities, and a permanent NEMA liaison
Havelock presence	Continuity Suite 19-C, Pacific Commons; medical evacuation, debris response, critical cargo protection, AI assurance, and protected personnel coordination

O

ORBITAL REALITY

Every wall is life support. Every unsecured object can become a projectile. Every electrical fire is also an atmosphere emergency. Havelock policy does not replace station safety authority.

What provisional personnel experience

- Arrival through the Crown Transit Ring and identity reconciliation gate.
- Escort across Pacific Commons under station, corporate, labour, customs, and health rules that do not always agree.
- A medical baseline at the Havelock flight-medicine suite before operational activation.
- A private orientation in Suite 19-C, a rotating section with gentle spin gravity and narrow armored Earth viewports.
- Mission credentials that grant narrow, temporary authority rather than general police or military power.
- Equipment issue and sealed transport to the Lower Mainland after final briefing.

VI

EMPLOYMENT AND CULTURE

What Havelock gives - and what it expects

Why people accept the offer

Benefit	What it means in practice
Strategic medical care	Emergency stabilization, private trauma care, printed organs, neural rehabilitation, augmentation maintenance, psychological care, and dependent emergency coverage.
Compensation	High base salary, availability stipend, deployment allowances, housing support, professional education, and approved equipment.
Identity and legal support	Protected identities, sealed records, mission-specific legal cover, counsel, and defense for good-faith authorized conduct.
Meaningful work	Complex emergencies where a skilled field team can save lives, preserve evidence, and keep institutions from failing each other.

Why some employees leave

- Constant operational monitoring and aggressive confidentiality.
- Difficulty separating employment, medical care, equipment maintenance, housing, and identity protection.
- Emergency transfers, mandatory certification, long availability windows, and high psychological pressure.
- Private arbitration, corporate control of mission records, and unclear boundaries between public service and private interest.

COMMON EMPLOYEE SAYING

"Havelock owns your calendar, your credentials, and your clinic. At least all three work."

THE FAVORABLE VERSION

"When the building floods, Havelock is the company whose people are already inside."

Corporate standards for field personnel

Standard	Expected conduct
Preserve life	Use the minimum force reasonably necessary; protect surrendering and incapacitated people.
Capture when practical	Negotiation, restraint, medical stabilization, and technical disablement are preferred to lethal force.
Protect evidence	Document custody, do not alter or destroy records except to prevent immediate harm.
Protect identities	Do not disclose clients, witnesses, facilities, methods, operational aliases, or teammates.
Report anomalies	Report memory discontinuity, cognition interference, identity conflict, unexplained impulses, power changes, or equipment behaving outside specification.
Return together	A dramatic act that leaves the team trapped, exposed, or unable to extract is an operational failure.

VII

PUBLIC QUESTIONS AND CONTROVERSIES

Difficult issues are part of the company record

Public issue	Balanced summary
2093 - Augmentation Maintenance Case	Former employees alleged that leaving Havelock made employer-funded cybernetics difficult to service. Havelock settled without admitting wrongdoing and created the Portable Body Service Standard; critics say proprietary parts still create dependence.
2095 - Rainline Housing Review	A municipal audit found cost overruns in emergency housing. Havelock said flood, medical, and security requirements expanded the scope. The completed units later performed well during coastal evacuations.
2096 - Asterion AI Disclosure Dispute	AI-rights advocates challenged the use of confidential system-behavior data without artificial-person consent. Havelock said the systems were licensed operational intelligences. Arbitration continues.
2097 - Professional Capability Complaint	Labour groups argue that employees cannot freely refuse employer-funded alteration when their job depends on enhanced reaction, sensory, or endurance standards.
2098 - Muir Point Expansion Review	Environmental and local authorities requested more disclosure regarding marine power, neurological rehabilitation, and protected-care expansion. Havelock cites patient privacy and dangerous-material controls; the expansion remains permitted.

THE PUBLIC IMPRESSION

Havelock is not an obvious villain. It maintains prosthetics, prints organs, operates medical extraction vehicles, rebuilds flood infrastructure, audits dangerous AI, protects public figures, sponsors professional heroes, and arrives when several agencies are arguing over responsibility.

VIII

CONTROLLED ADDENDUM

H3 Operational - compartmented by assignment

Havelock Emergency and Recovery Services

Your legal employer is Havelock Continuity & Recovery Services Ltd., a wholly owned Havelock Industries subsidiary. **Your operational sponsor is the Special Measures Office.** Most ordinary employees assume Special Measures works under classified government contracts. They are not cleared for client identities, receiving sites, or the full mandate.

Special Measures handles	Examples
Enhanced persons	Uncontrolled ability, prohibited augmentation, hazardous professional systems.
Neurological and identity events	Cognition interference, identity contamination, mass perception incidents.
Sensitive artificial systems	AI failures, autonomous systems with uncertain authority, protected software.
Strategic technology	Unverified prototypes, prohibited tools, evidence with cross-border consequences.
Jurisdictional collisions	Incidents in which several lawful authorities cannot act together quickly enough.

Field Measures Unit Three

Field	Assignment
Unit	Field Measures Unit Three - FMU-3
Region	Pacific Special Measures Region
Clearance	H3 Operational, compartmented by assignment
Status	Provisional; no permanent field commander
Authority	Mission-specific, temporary, recorded, and limited to issued credentials
Immediate sponsor	Director Mireille Dagenais

Your stated duties

- Protect life and stabilize dangerous incidents.
- Capture hazardous individuals alive when practical.
- Preserve sensitive technology and reliable evidence.
- Prevent public escalation and unnecessary panic.
- Transfer subjects only to an authorized receiving institution or officer.
- Maintain confidentiality across jurisdictions.

Havelock doctrine

Doctrine	Operational meaning
Life before evidence	A clean recovery is never worth a preventable civilian death.
Capture before termination	A dangerous subject may also be a victim, witness, patient, or

Doctrine	Operational meaning
	source of information.
Containment before disclosure	Public exposure can turn a manageable incident into panic, violence, or political exploitation.
The field team owns the moment	Headquarters supplies authority and support; the people on scene decide how to survive it.
Everything is recorded	Every use of force, restraint, power, classified device, and custody transfer is reviewed.

IX

FIRST-DAY WORKSHEET

Complete before the first operational briefing

1. What did Havelock offer, protect, erase, fund, or promise that made your character accept this job?

2. Which benefit matters enough that losing it would change your character's choices?

3. Which clause in the employment agreement makes your character hesitate?

4. What body system, weapon, suit, vehicle, identity, or treatment is partly controlled by someone else?

5. Who is named as your independent advocate or emergency dependent contact?

6. What name appears on your operational credential: legal name, public identity, field name, or callsign?

7. Which FMU-3 role will you take first: entry, containment, technical, medical, evidence, or transport?

8. What about the orientation feels professional, reassuring, secretive, expensive, or unsettling?

H

FINAL FIRST-DAY INSTRUCTION

Read the employment agreement. Ask questions. Choose your operating name. Director Dagenais will not

activate FMU-3 until every member has either signed, negotiated an amendment, or accepted provisional contractor status for the first operation.
